 <p>maono Podcasting Microphone kit AU-A04</p> <p>User Manual</p>	<h3>Specifications</h3> <p>Microphone-core: Dia.16mm Condenser Polar Pattern: Cardioid Frequency Response: 30Hz-16kHz Sensitivity: -38dB±3dB (0dB=1V/Pa at 1kHz) Equivalent Noise Level: 16dBA Max. Maximum SPL: 120dB S/N Ratio: 70dB Sampling Rate: 192kHz/24bit Cable: USB A to B cable 2.5m</p>  	<h3>Specifications</h3> <h4>Features</h4> <ul style="list-style-type: none"> • Large capsule with plated membrane • Cardioid polar pattern • Ultra-low noise transformerless circuitry • New, state-of-the-art surface mount electronics • Heavy-duty satin nickel finish • Stable metal boom arm system with pop filter • Boom arm with 2-axis swivel mount for accurate positioning • Built-in Sound card, Plug and Play operation for PC, MAC. Setup is so easy--just connect and go. <h4>Microphone Placement</h4> <p>The logo of "M" on the body of the microphone indicates the front of the microphone, and the pick-up area of the cardioid pattern. Please be sure to have the side of the logo facing the sound source you wish to record. As with many other aspects of the recording process, finding the preferred sound is a matter of experimentation.</p>	<h3>Specifications</h3> <h4>Recording vocals</h4> <ul style="list-style-type: none"> • We strongly recommend using the pop filter for all vocal recording. This aids in minimizing plosive sounds (hard P, B T and K sounds) that produce a sudden jet of air which can cause the capsule to overload and produce a popping sound. • Any moisture on the microphone capsule can cause problems for condenser microphones, however the use of the pop shield will reduce the risk of this occurring. • Placement of the microphone and pop filter relative to the vocalist may be varied on several factors including room acoustics, the vocal performance, and whether the vocalist has a high or deep voice. • An ideal reference is to begin with the pop filter directly in front of the vocalist, and approximately 15cm (6") away from the microphone. This will assist in keeping the performer at a constant minimum distance from the microphone and helps to maintain reasonable recording levels. • Experimentation should be made with the angle from which the vocalist is addressed, as different results can be achieved when the vocalist is off-axis to the microphone. 	<h3>Accessories</h3>
